ITEMS NEEDED:

Building blocks

What is the secret to building a tall building? Can I build a building on one small block?

Use one block as a foundation and see how high you can build.

We can use one small block for our foundation if we're building a small building. But if we want to build it high, we need a much stronger foundation. The sturdier the foundation is, the higher we can build, and the longer that building will last.

God wants us to build our lives on a firm foundation, and that foundation is his son Jesus. Any other foundation will crumble and collapse under the weight of the world and its troubles. Only Jesus can help us to stand strong in good times and bad, sickness and health, triumph and tragedy.

Don't build your life on money or popularity or anything else from this world. Make Jesus #1, and build your life on the solid rock of Christ.
